# FocusPhone™

FocusPhone is a handheld cordless remote for your lighting console.

Utilizing a standard 900MHz cordless telephone, the FocusPhone lets you control your lighting console from the top of a ladder, a ceiling catwalk, a personnel lift, or anywhere within the phone's range.

The system consists of a cordless phone handset and receiver, and the FocusPhone interface unit. FocusPhone converts tones from the phone into console commands to select channels or dimmers, set levels, use groups, run cues, and invoke macros. The FocusPhone attaches to the console's RFU or Keyboard port.

RECEIVER   FOCUSPHONE   CONSOLE

HANDSET

Features:

- wireless remote control
- one handed operation
- lightweight handset
- rechargeable batteries
- low replacement cost if phone is damaged or lost
- use with any cordless (not cellular) phone

- permits control by channel or dimmer numbers
- includes over a dozen direct console commands
- allows extended control of console through macros
- does not interfere with normal console use

Commands:
